

1050 pure aluminum plate sheet belongs to a series of products, according to the international brand naming principles, content must reach 99.5% to the top for qualified products, because they do not contain other elements of technology, the production process is relatively simple, [1050 aluminum plate](#) sheet prices are relatively cheap, is most commonly used in the conventional industry a series of.

Alloy	Temper	Thickness (mm)	Width (mm)	Length (mm)	Final product
1050aluminium plate sheet	O,H12,H14,H16 H18,H19,H22,H24 H26,H28,H32,H34 H36,H38	0.2-4.5	100-2600	500-16000	PS board base, signs, lamps, nameplates, etc.

Performance advantage:

1, with excellent forming characteristics, high corrosion resistance, good electrical conductivity and thermal conductivity;

2, long service life, low cost, and high recovery value;

3, 1050 aluminumsheet plate processing technology is mature, the price relative to other high-grade aluminum alloy has a huge advantage;

4, with semi continuous casting production line 6, continuous casting and rolling production line of 10, other large-scale processing equipment of 44 units, the annual output of up to 450 thousand tons;
