

Aluminum magnesium alloy and aluminum manganese alloy called antirust aluminum alloy components, because the two have increased their anti-corrosion properties, aluminum manganese alloy is 3003,3004,3105, aluminum magnesium alloy were 5005,5252,5251,5050 5052,5754,5083,5056 ,5086 aluminum plate and so on according to the level of the content of magnesium alloy.

Alloy	Temper	Thickness (mm)	Width (mm)	Length (mm)	Final usage
5086 Aluminium Plate Sheet	O,H12,H14, H16,H18,H19, H22,H24,H26, H28,H32,H34 H36,H38,H111, H112,H114,H 116,H321	0.15-600	20-2600	500-16000	Aircraft panels can be welded parts, refrigeration equipment, television tower, equipment, transportation equipment, etc.

Performance advantage

- 1, [5086 aluminium plate sheet](#) has high corrosion resistance, medium strength, good weldability;
- 2, 5086 aluminium plate sheet has low density, high tensile strength, high elongation;
- 3, 5086 aluminium plate sheet has no oil, no aluminum surface waves, no scratches, no roller, uniform cutting edges and burr;
