

Brushed aluminum sheets alloy 1100

[Brushed aluminum alloy 1100](#) is produced by using abrasive paper repeatedly to scrape lines on aluminum sheet. The main technological process can be divided into three parts: degrease, sander and washing. In the process of scraping lines of aluminum sheet, the special skin membrane technology after anodization can make the aluminum sheet surface generated a epithelial layer contained the metal elements, each tiny silk mark is visible, it makes the metal radiant fine-hair gloss.

Specification of brushed aluminum sheets 1100:

Alloy: 1100

Temper: H14, H16, H18, H24, H32, H34

Thickness: 0.05mm-3.0mm

Width: 80-1600mm

Color: RAL Color, Silver, Golden, Bronze, Black, Pink, Red, green, stainless steel color

Brushed: Double side finished

Surface grain: straight grain, Nakanaga grain, short grain, cross pattern grain

Protection of surface: with film or not, according to your requirement

Packing Details: Strong timber pallet seaworthy packing according to ISPM 15

Application of brushed aluminum sheet alloy 1100:

1. Range hood and flue gas turbine
2. Air-condition
3. Water heater and calorifier
4. Switch and on-off
5. Electronic hardware
6. Lamps and lanterns
7. Aluminium composite panel
8. Household and domestic appliances
9. Mobile phone shell
10. Aluminum frame
11. Fine ambry
12. Laminated board
13. Sign and name plate
14. Luggage,cases and suitcases
15. Fire-proof plate
16. Computer panel
17. Car decoration panel

Features of brushed aluminum 1100:

1. Super strong metallic, rich color, fashionable and upscale.
2. Can be directly stamping forming, and the bending parts resistant to burst.
3. Laundering durability, scratch resistant.
4. Anti-static electricity, no aspiration, easy to clean.
5. Used where corrosion resistance and good mechanical properties are primary requirements.
6. It is easily formed and welded, and its matte finish is suitable for painting and plating.
7. Abrasion resistance, non post-formable, stain resistance, water resistance
